

## Springfield XDM Compact BB

£ 145

### Description

Two-Tone .177 (BB) Boasting the same features that made the firearm such a big hit, the XDM 3.8" is a shooter friendly, compact CO2 pistol that feels and handles just like the centerfire pistol it replicates. An authentic grip safety and functional trigger safety provide an unmistakable similarity to the feel of the real steel version. And the airgun replica even field strips just like the firearm too! Operating from a single 12-gram CO2 cartridge that loads into the 20 round drop-free magazine, the XDM 3.8 spits BBs out at velocities up to 270 fps! The air pistol also has a strong blowback, simulating recoil, with each pull of the trigger. To make sure each shooter finds a comfortable grip, the pistol also comes with three sizes of interchangeable backstraps and grip frame extensions. This makes the XDM 3.8 one of the most customizable replica CO2 action pistols on the market!
